

# **Circle Multiplication**

- **The class is divided into two teams**
- **Each team forms a circle**
- **To start the game the dice are thrown and the “thrower” has to find the product of the numbers that appear on the two dice, and shout this out.**
- **If they are not sure of the answer the person who is directly alongside them can help them out.**
- **When the correct answer is given the dice are passed onto the next player [to the right].**
- **When the dice arrive back to the first thrower all the members of the team raise their hands.**
- **The first team to raise their hands is the winner.**
