

REAL WORLD EXAMPLES - AI IN THE CLASSROOM

Lesley from Silverdale shares how she is using AI to support her teaching and learning programme. From planning to delivery.

Key Ideas

Have you considered that AI can act as a virtual teaching assistant for you in the classroom?

AI is making its presence felt in the world right now, and often we are not even aware of how it impacts on our day to day online activities. In the classroom AI cannot legally be used by students younger than 13 but teachers have access to numerous programmes that use AI and we can be using it to support our classroom practices.

Hello.
How can I help you today?

Find hotels in Phuket for a week, and suggest a packing list

Help me pick a movie to watch based on a genre

Settle a debate: how should you store bread?

Draft an email with a packing list for an upcoming trip

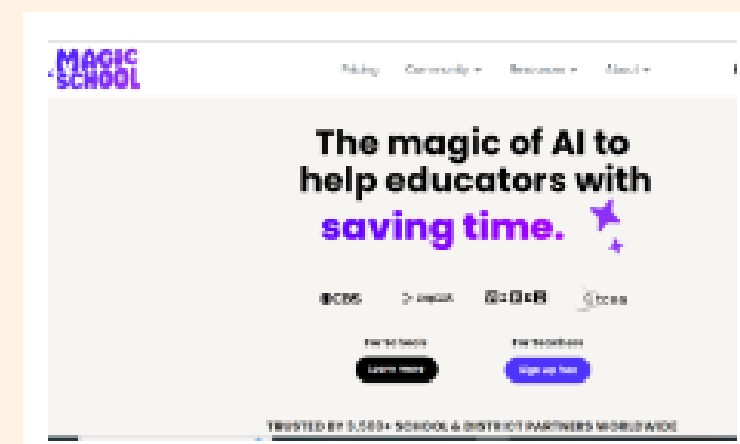

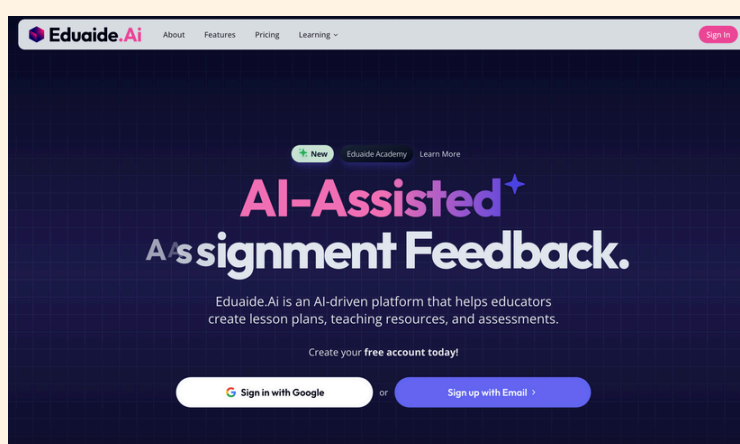

Your conversations are processed by human reviewers to improve the technologies powering Gemini Apps. Don't enter anything that you wouldn't want to be reviewed or used.

Some of the applications of AI can include:

- *Helping to cut down on planning time
- *Differentiate content quickly
- *Re-word and improve texts
- *Create images / questions / scripts / lessons / poems / math problems / movies and much, much more.

The advantages of using AI are great - it saves time, gives you a starting point for generating ideas, finds or creates information very quickly (less than five seconds in most cases!) and the limits are only as wide as your imagination. On the other hand, often the created texts are not quite as you want them to be, and require either some editing or asking the AI to redo the attempt. It still takes a human brain (and always will, in my opinion) to check for accuracy, truth and if the generated result is fit for purpose.

I've listed some AI generator sites below this, and many commonly used websites, such as Canva and You Tube, have their own AI functions now as well.

Podcast: AI can be a teaching partner
